**Integrating C-ITS
into road operators'
day-to-day-business**
ITS Forum Webinar

Summary Report

The European ITS Platform (EU EIP) and C-Roads have jointly organised a webinar on "Integrating C-ITS into road operators' day-to-day business". The webinar on 5th November, 2021, has served as the 6th part of EU EIP's Web ITS Forum. It has featured – in a total set of seven presentations – key C-ITS related results from the EU EIP work program and selected organisational results from C-Roads. The webinar has been attended by almost 100 experts from more than 20 countries all over and even beyond Europe.

Roberto Arditi (SINA Scientific Coordinator – ASTM Group) and **Victoire Champenois** (European Commission, DG MOVE) have introduced the policy dimension of the topic and informed about recent EC initiatives in the field (a.o. Green Deal contribution of ITS and C-ITS, revision of ITS Directive, revision of Delegated Acts). **Farzin Godarzi** (BASt) has presented a brief but comprehensive view on the C-ITS results. The highlighted recommendations have set the scene for the following presentations. **Paul Wadsworth** (Capita) has shared insight into the process guidance on implementation issues of the entire lifecycle, of how to set up, design and plan, install and commission as well as operate and maintain a C-ITS service. **Orestis Giamarelos** (BASt) has provided a deeper view on how the C-Roads specifications have been integrated into the Reference Handbook for Harmonised ITS Core Service Deployment in Europe. **Peter Lubrich** (BASt) has shared the findings of extending the process of proposing, testing, validating and enhancing quality packages for ITS services covered by Delegated Regulations in the scope of the ITS Directive (2010/40/EU) to C-ITS services. **Marek Šcerba** (VSB) has complemented the set of presentations by sharing the lessons learned from piloting C-ITS services in C-Roads. **Martin Böhm** (AustriaTech) has addressed the transition challenge from C-ITS pilots to building an ecosystem for fully operational C-ITS service delivery. **Carlos Viktorsson** (Sweco) finally has taken a look into the future on how C-ITS deployment from the infrastructure point of view can be continued after the initial deployment phase.

The recording of the event is accessible at https://www.forumeuropeanitsplatform.com/. All webinar presentations as well the EU EIP C-ITS deliverables are accessible from the achievements folder on the EU EIP website (https://www.its-platform.eu/achievement/integrating-c-its-into-road-operators-day-to-day-business).
